## Dental Health Assessment - Cat

### STAGE 0 Clinically Normal

Your cat has healthy-looking teeth.

### STAGE 1 Gingivitis Only

Your cat may have bad breath, some tartar build-up and reddening of the gums.

### STAGE 2 Early Periodontitis

You may notice your cat's breath smelling stronger, redder gums, more tartar and some discoloration.

### STAGE 3 Moderate Periodontitis

This stage is characterized by very bad breath, a large build-up of tartar especially on molars, very discolored teeth and very red gums. Your cat may favor chewing on one side.

### STAGE 4 Advanced Periodontitis

You will likely notice your cat has severe bad breath and may show signs of pain, such as being head shy or dropping kibbles when they chew.
